App-based house call for medical assistance
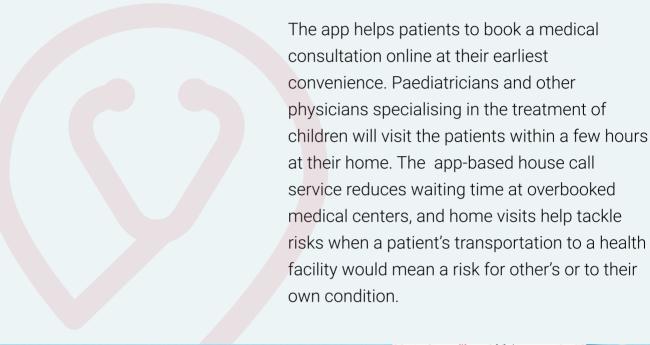

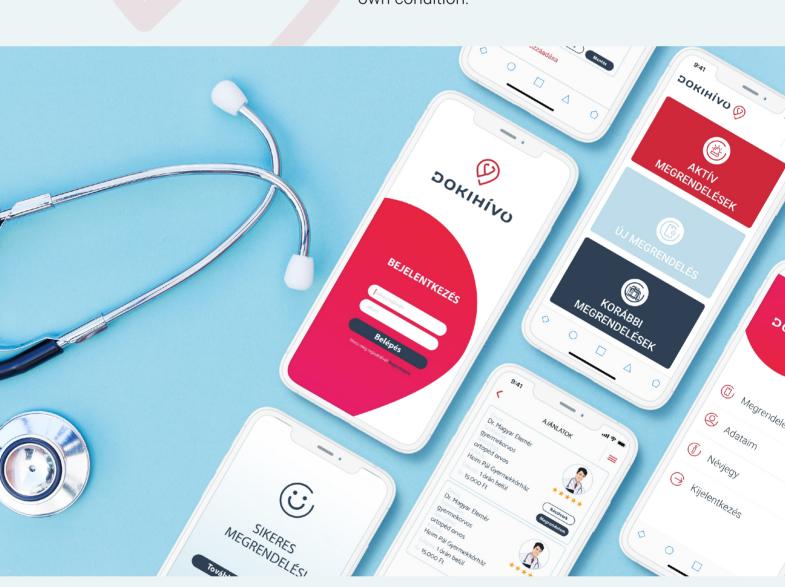

Dokihivo.hu

We turned a small start-up company's rapid response medical service project into practice to help families during the COVID-19 pandemic.

The app helps patients to book a medical consultation online at their earliest convenience. Paediatricians and other physicians specialising in the treatment of children will visit the patients within a few hours at their home. The app-based house call service reduces waiting time at overbooked medical centers, and home visits help tackle risks when a patient's transportation to a health facility would mean a risk for other's or to their own condition.

Dokihivo is currently available for Android and iOS platforms. The system stores required data of the users to speed up the administration process. Users can track ongoing requests, search the archive for information about previous visits, and can rate the services.

The outbreak of the pandemic showed the unquestionable need for Dokihivo in Hungary. Idea of the start-up project was developed by Balázs Kalamár, the mobile development collaboration started in April 2020.
